Sl. No.: 20009341

Register		-	
Number	1000		-

2014

MECHANICAL AND PRODUCTION ENGINEERING (Degree Standard)

Time Allowed: 3 Hours]

[Maximum Marks: 300

MPE08

Read the following instructions carefully before you begin to answer the questions.

IMPORTANT INSTRUCTIONS

- This Booklet has a cover (this page) which should not be opened till the invigilator gives signal to open
 it at the commencement of the examination. As soon as the signal is received you should tear the right
 side of the booklet cover carefully to open the booklet. Then proceed to answer the questions.
- 2. This Question Booklet contains 200 questions. Prior to attempting to answer the candidates are requested to check whether all the questions are there and ensure there are no blank pages in the question booklet. In case any defect in the Question Paper is noticed it shall be reported to the Invigilator within first 10 minutes.
- 3. Answer all questions. All questions carry equal marks.
- You must write your Register Number in the space provided on the top right side of this page. Do not
 write anything else on the Question Booklet.
- 5. You will also encode your Register Number, Subject Code, Question Booklet Sl. No. etc. with Blue or Black ink Ball point pen in the space provided on the side 2 of the Answer Sheet. If you do not encode properly or fail to encode the above information, your Answer Sheet will not be evaluated.
- 6. Each question comprises four responses (A), (B), (C) and (D). You are to select ONLY ONE correct response and mark in your Answer Sheet. In case you feel that there are more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each question. Your total marks will depend on the number of correct responses marked by you in the Answer Sheet.
- 7. In the Answer Sheet there are four circles (A), (B), (C) and (D) against each question. To answer the questions you are to mark with Ball point pen ONLY ONE circle of your choice for each question. Select one response for each question in the Question Booklet and mark in the Answer Sheet. If you mark more than one answer for one question, the answer will be treated as wrong..e.g. If for any item, (B) is the correct answer, you have to mark as follows:

- 8. You should not remove or tear off any sheet from this Question Booklet. You are not allowed to take this Question Booklet and the Answer Sheet out of the Examination Hall during the examination. After the examination is concluded, you must hand over your Answer Sheet to the Invigilator. You are allowed to take the Question Booklet with you only after the Examination is over.
- 9. The sheet before the last page of the Question Booklet can be used for Rough Work.
- Failure to comply with any of the above instructions will render you liable to such action or penalty as the Commission may decide at their discretion.
- 11. Do not tick-mark or mark the answers in the Question booklet.

- 1. A beam of uniform strength is a beam in which
 - (A) the bending moment is the same throughout the beam
 - (B) the shear stress is the same throughout the beam
 - (C) the deflection is the same throughout the beam
 - the bending stress is the same along the length of the beam.
- 2. The strain energy stored in a body of volume V and subjected to a gradually applied load which induces a stress σ is given by
 - (A) $\frac{\sigma E}{V}$

(B) $\frac{\sigma E^2}{V}$

(C) $\frac{\sigma^2}{E}V$

- $\frac{1}{2}\frac{\sigma^2}{E}V$
- 3. For ductile materials, the most appropriate failure theory is
 - maximum shear stress theory
- (B) maximum principal stress theory
- (C) maximum principal strain theory
- (D) shear strain energy theory
- 4. In an n-link mechanism maximum, possible number of elements on any of the n links, for odd value of n is
 - $(A) \quad n/2$

(B) (n-1)/2

(n+1)/2

- (D) n(n+1)/2
- 5. In an offset slider-crank mechanism with length of connecting rod *l*, crank radius *r* and offset *e*, the crank will revolve only when
 - $l \geq (r + e)$

(B) $l \leq (r - e)$

(C) l > (r - e)

- (D) l < (r + e)
- 6. Kliens construction can be used when
 - (A) crank has uniform angular velocity
 - (B) crank has non-uniform velocity
 - (C) crank has uniform angular acceleration
 - crank has a uniform angular velocity and angular acceleration
- 7. For a slider crank mechanism, the velocity and acceleration of the piston at inner dead centre will be
 - (A) 0 and 0

(B) 0 and $w^2 r$

(C) $0 \text{ and } < w^2 r$

0 and $> w^2 r$

8.	The angular velocities of two pulleys connected either by an open belt or a cross belt drive						
	are		to the in the	,			
	(A)	directly proportional			•		
	(B)	inversely proportion t		S	•		
	(C)	proportional to squar					
	(D)	proportional to squar	e root of their dia	amete	rs .		
0	Cana	n in halt drive is due to			•		
9.		p in belt drive is due to weak material of the			•		
	(A)				•		
	(B)	weak material of the		1 14			
	(D)	friction between belt		ie beit	when it passes from tight side to slack side		
10.	Proel	l Governor as compare	d to porter gover	nor	•		
	(A)	is more sensitive	,		· <u></u>		
	(B)	is less sensitive			•		
	(C)	requires weights of si	naller size	. – . –	-		
•	D	is more sensitive and	requires weights	s of sr	maller size		
	0	:4:	· .	u záža	~£.		
11.	Sensitiveness of a governor is defined as the ratio of (A) mean speed to range of speed						
	(A)						
	(0)	range of speed to mea		9 W C C J			
	(C)	maximum equilibrium					
	(D)	· minimum equilibrium	n speed to mean	speea	•		
12.	The frequency of the secondary forces as compared to primary force is						
1.2.	(A)	one half	, ioreco ao our	Par	double		
	(C)	one fourth		(D)	one third		
	(0)	one tour th		(D)	, one time		
13.	Natu	ral frequency of a syste	em is due to		5 🕾		
•	(1)	free vibration	•	(B)	forced vibration		
	(C)	resonance		(D)	damping		
14.	What		a amand subject	ia laa	than anitical around the phase difference		
14.		een displacement and c	_		s than critical speed, the phase difference		
		180°	entinugai torce	(D)	90°		
	(A)			(D)			
	. (C)	45°			0°		
15.	A sha	aft with two rotors at it	's ends will have				
	(A)	three nodes	or can be have and,	(B)	two nodes		
	· (C)	one node	٩	· (D)	zero node		
			•	1-1			
MPE	208		. 4		٥		

16.		While calculating the stress induced in a closed helical spring. Wahl's factor is considered to account for						
	(24)	the curvature and stress conce	antrate.	d effec	t	•		
	(B).	shock loading	Hitrate	d effec	,			
	(C)	fatigue loading	~		2			
·								
	(D)	poor service conditions			NC	·		
17.	been	t spiral spring mode of strip of subjected to a winding couple situde of winding couple is near	which	-				
	· (A)	20.8 Nmm		(B)	41.6 Nmm			
. 3	S	62.5 Nmm		(D)	83.3 Nmm			
18.		e designing a screw in a screw are taken as	jack ag	gainst	buckling failure, the end o	onditions for a		
•	(A)	both ends fixed		(B)	both ends hinged			
	(C)	one end fixed and other end hi	nged	DY	one end fixed and other en	d free		
				2				
19.	If the	size of the flywheel in a punchi	ng mac	hine i	s increased, then	• •		
	(A) ·	fluctuation of speed as well as	fluctua	tion o	f energy will decrease			
	B	fluctuation of speed will decre	ase but	t the f	luctuation of energy will inc	rease		
	(C)	fluctuation of speed will increa	ise and	the fl	uctuation of energy will dec	rease		
	(D)	fluctuation of speed as well as	fluctua	tion o	f energy will increase			
						•		
20.	When	the pitch angle in Bevel gears	is less t	than 9	0° it is referred to as an	•		
	4	external Bevel gear	5	(B)	internal Bevel gear			
	(C)	crown gear	•	(D)	meter gear			
					•			
21.	In or	der to increase the angle of wrap	o it is p	referr	able to go in for			
	SAS	Crossed belt drive	. 8.	(B)	Open belt drive			
	(C)	Horizontal open belt drive		(D)	Vertical open belt drive			
		:			- 1	2		

22.	One	One of the disadvantages of a hydraulic shaper compared to the mechanical shaper is								
7	SAY	stopping point of the cutting stroke can vary depending upon the resistance offered to cutting								
	(B)	less strokes per minute								
	(C)	power available varies	s during the cut	ting s	troke .					
	(D)	cutting speed remains	constant throu	ghout	the cutting stroke	•				
. 1					·					
23.		The lip angle used in a drill for drilling the Hard materials								
•	(A)	128°	136°.							
	(C)	90°		(D)	60°					
24.	Reci	rculating ball screws are	used because							
	(A)	(A) they are easy to manufacture								
	(B)	power required for dri	iving them is sn	nall dı	e to small friction	*				
	(C)	frictional resistance is	more compare	d to A	CME threads	. *				
	(D)									
		4								
25.	The	The best machine tool to cut an internal spline in steel is								
3 .5.	(A)	milling machine		(B)	slotting machine					
	(C)	lathe		(D)	grinding machine					
	(-/	•	*	(-)		•				
0.0	The	autting tool in a milling	m/o io hold in n	onition	a h	1.7				
26.	(A)	cutting tool in a milling arbor	m/c is neid in p			×* ·				
	(0)			(B)	spindle .					
	(C)	column	,	(D)	knee	• •				
27.	The	cutting speed for reamin	ng aluminium a	nd its	allovs is					
	40	45-70 m/min		(B)	15-20 m/min	•				
	(C)	10-12 m/min		(D)	5–20 m/min					
28.	Dept	th of cut for roughing op	eration normall	y vari						
	(A)	5 mm to 10 mm		(B)	1 mm to 5 mm	· · · · · · · · · · · · · · · · · · ·				
	(C)	0.2 mm to 1 mm		(D)	0.01 mm to 0.2 mm	•				
29.	The steel		utting speed in	metre	es per minute for HSS too	ol for cutting mild				
	(A)	15		(3)	30					
	(C)	60		(D)	90					
	(-)			/						

- 30. EDM stands for
 - (A) Energy Discharge Method
 - (C) Energy Direct Machining

Electro-Discharge Machining

- (D) Efficient Direct Method
- 31. In USM process, the cutting rate will be faster, if amplitude of vibration is
 - (A) minimum

maximum

(C) constant

- (D) normal
- 32. In ECM process, the MRR is given by
 - (A) $\frac{\text{F.I}}{\rho.\text{A.V}}$

(C) $\frac{\text{F.}\rho.\text{A.V}}{\text{I.At}}$

- (D) $\frac{\text{F.I.At}}{\rho.\text{A.V}}$
- 33. In ECG process, a continuous steam of non-corrosive salt solution is passed through work and tool. This solution acts as
 - (A) an electrolyte

(B) a coolant

-) an
 - an electrolyte and coolant
- (D) dielectric medium
- 34. The cutting rate in mm/min for LBM process is equal to
 - (A) $\frac{C \times P \times t}{E \times A}$

(B) $\frac{P \times t}{C \times E \times A}$

(C) $\frac{\mathbf{E} \times \mathbf{A} \times \mathbf{t}}{\mathbf{C} \times \mathbf{P}}$

- $\frac{\mathbf{C} \times \mathbf{P}}{\mathbf{E} \times \mathbf{A} \times \mathbf{t}}$
- 35. Operating characteristic curve in sampling plan is drawn between
 - (A) defective items and total number of items
 - (B) no. of accepted items and total number of items

probability of acceptance and percentage defective

- (D) no. of rejections and percentage defective
- 36. The following surface roughness parameter is expressed in percentage
 - (A) Ra

(B) R_p

(C) R_q

10) to

37.	The allowance factor in a time study is to (A) adjusts normal time for errors and rework				
	(B) adjusts standard time for lunch breaks adjusts normal time for personal needs, unavoidable delays and fatigue allows workers to rest every 20 minutes				
38.	The time study of a work operation at a restaurant yielded an average observed time of 9 minutes. The analyst rated the observed worker at 90%. The normal time of this operation is (A) 9 minutes (B) 81 minutes (C) 90 minutes				
39.	Aggregate planning is concerned with quantity and timing of production in the (A) short term (B) intermediate term long term (D) medium term				
40.	Five jobs are to be processed through two work centres. The time for processing each job is given below. Select the sequence in order to minimize the total processing time				
	(A) ADBCE (C) BADCE (D) BEDCA (D) BDECA				
41.	High volume production of assembled products is most closely associated with which one of the following layout types? (A) cellular layout (B) fixed position layout (C) process layout product layout				
42.	Cycle counting in inventory (A) provides a measure of inventory turnover (B) assumes that all inventory records must be verified with the same frequency is a process by which inventory records are periodically verified provides annual demand				
43.	The purpose of the stepping store is to (A) develop the initial solution to a transport problem (B) identify the relevant costs in a transportation problem determine whether a given solution is a feasible or not assist one in moving from an initial feasible solution to the optimal solution				
44.	A feasible solution to a linear programming problem must satisfy all of the problem's constraints simultaneously need not satisfy all of the constraints, only some of them (C) must not be a corner point of the feasible region (D) must give the maximum possible profit				

45. The factors influencing job design is (A) individual differences (B) technology involved (C) organization structure and internal climate					
	Di	individual difference, technology			, and internal climate
46.	Choo	se the wrong statement			
		most commonly used tests in staffi	ing can be		
4	(A)	intelligence tests	(B)	proficiency and apti	itude tests
	· (C)	personality tests	1	toughness test	
47.	The i	managerial function of controlling	is		
	(A)	the process of predicting the der		•	•
	(B)	the measurement of satisfaction the measurement and correction			
-	(D)	process of making the work envi			
			-		
48.		r of mass 150 kg is travelling on the car is ————— (Take μ	= 0.45).		The time needed to
	(4)	t = 2.26 sec		t = 3.20 sec	
	(C)	t = 3.8 sec	(D).	t = 4.2 sec	× .
49.		torist travelling at a speed of 18 F			kes and comes to rest
		skidding 75 m. The time required			V 6 - 7 - 7
	(A)	t = 30.25 sec t = 28.84 sec		t = 29.94 sec	,,
	· (C)	t – 20.04 sec	(D).	t = 26.22 sec	
50.		rticle is projected with an initial ve maximum height attained by the p		m/sec at an angle of	75° with horizontal.
	(A)	171.19 m	(B)	185.22 m	;
	(C)	221.11 m	(D)	198.20 m	
					sealberdud)
51.		th to radius ratio $\frac{l}{r}$ of a solid cyl		ch that the moment	s of inertia about the
		tudinal and transverse axes are eq	ual is	<u> </u>	
	(A)	1	(5)	√3	
	(C)	$\sqrt{5}$.	(D)		
52.	Ratio	of moment of Inertia of a circular	body abou	t its x axis to that al	out y axis is
	(A)	0.5	(B)	1.0	
	(C)	1.5	(D)	2.0	
53.	The	motion of a body moving on a c	urved path	n is given by a equa	ation $x = 4 \sin 3t$ and
		$\cos 3t$. The resultant velocity of th			2 1 2 1 2 1 2 1 2 1 1 1 1 1 1 1 1 1 1 1
	(A)	30 m/sec	(B)	24 m/sec .	•
	The state of the s	12 m/sec	(D)	40 m/sec	
*		4	0		MDEGO

- 54. The heating of wet steam at constant temperature till it becomes dry saturated is similar to that of heating at a

 (A) constant volume
 (C) constant entropy

 (D) constant enthalpy
- 55. The dryness fraction of steam is equal to

Where $M_g = Mass$ of dry steam

 $M_f = Mass of wet steam$

- 56. With the increase of pressure
 - (A) The boiling point of water decreases and enthalpy of evaporation increases
 - The boiling point of water increases and enthalpy of evaporation decreases
 - (C) Both the boiling point of water and enthalpy of evaporation decreases
 - (D) Both the boiling point of water and enthalpy of evaporation increases
- 57. The air standard efficiency of an Otto cycle is given by

(C)
$$1 - \frac{1}{(r)^{\gamma - 1}}$$
 (B) $1 + \frac{1}{(r)^{\gamma - 1}}$ (C) $1 - (r)^{\gamma - 1}$ (D) $1 + (r)^{\gamma - 1}$

Where (r) = compression ratio

- 58. The entropy may be expressed as a function of
 - Pressure and temperature (B) Temperature and volume (C) Heat and work (D) Internal energy
- 59. The heating of a gas at constant pressure is governed by
 - (A) Boyle's law . (B) Charles' law (C) Gay- Lussac law (D) Joule's law
- 60. Which of the following parameter is 100 CC in a 100 CC engine?
 - (A) Fuel tank capacity
 (B) Lubricating oil capacity
 (Swept volume
 (D) Cylinder volume

61.	spee		e diamete	s a mean effective pressure of 6 bar. The
		6.7 KW	power us	13.3 KW
	(A) (C)	26.6 KW	(D)	39.9 KW
	(0)	20.0 KW	(D)	39.9 KW
62.	The	knocking tendency in C.I. engine in	creases w	ith
	(4)	Decrease of compression ratio	(B)	Increase of compression ratio
	(C)	Increase of Inlet air temperature	(D)	Increase of cooling water temperature
63.	An a	urcraft cannot be designed without t	he part o	f
	(A)	Turbine	(B)	Compressor
-= ((0)	Combustion chamber	(D)	Propeller
64.	Shoo	ek effect in a CD nozzle is felt in		
	(A)	Divergent portion	(B)	Inlet portion
	(C)	Convergent portion	(D)	Throat portion
				-
65.	The	thrust coefficient in rocket propulsion	n is com	outed by using the following values
	(A)	Combustion pressure and throat a	area of no	zzle ·
	(B)	Combustion pressure and exhaust		
1	(0)	Combustion pressure, thrust and	nozzle th	roat area
	(D)	Thrust, effective exhaust velocity

76.		the sonic velocity (C) for the $36 \ N/cm^2$	crude oil o	of specific gravity 0.8 and bulk modulus					
	(A)	C = 1500 m/sec	(8)	C = 1383 m/sec					
٠.	(C)	. C = 980 m/sec	(D)	C = 1291 m/sec					

Dry bulb and Wet bulb temperature will be equal when

70.

- 77. The Bernoulli's equation can take the form
 - (A) $\frac{P_1}{p_1} + \frac{V_1^2}{2g} + Z_1 = \frac{P^2}{p_2} + \frac{V_2^2}{2g} + Z^2$
- (B) $\frac{P_1}{p_1 g} + \frac{V_1^2}{2} + Z_1 = \frac{P^2}{p_2 g} + \frac{V_2^2}{2} + Z^2$
- (C) $\frac{P_1}{p_1g} + \frac{V_1^2}{2g} + Z_1g = \frac{P^1}{p_2g} + \frac{V_2^2}{2g} + Z_2g$ $\frac{P_1}{p_1g} + \frac{V_1^2}{2g} + Z_1 = \frac{P^2}{p_2g} + \frac{V_2^2}{2g} + Z_2$

- 78. Hydraulic jump is used for
 - Increasing the flow rate (A)
 - (C) Reducing the velocity of flow
- Reducing the flow rate
 - Reducing the energy of flow
- 79. Which of the following fluid is heaviest?
 - (A) Air
 - (C) Glycerine

- Castor oil
- Carbon tetra chloride
- 80. Dynamic viscosity (μ) has the dimensions as
 - $-MLT^{-2}$ (A)
 - $MLT^{-1} T^{-2}$ (C)

- In axial flow fans and turbines fluid enters and leaves as follows 81.
 - radially, axially

axially, axially

axially, radially

- combination of axial and radial
- For a given head the discharge through a pelton turbine with increase in speed 82.
 - (A) Decreases .

(C) Does not change

- First increases then decreases
- 83. Francis and KAPLAN turbines fall under the category of
 - Impulse turbines (A)

B) Reaction turbines

(C) Axial flow turbines

- Mixed flow turbines
- Multistage centrifugal pumps are used for 84.
 - High discharge requirements (A)
 - (C) Obtaining low discharge
- Obtaining high head
- Obtaining low head

85.	The c	correction factor of	multipass count	erflow	hea	at exchanger depends on .				
	(A)	Fluid properties		•						
•	(B)	(B) Geometry alone								
	Temperature of Inlet and outlet fluid streams only									
-	(D)	Mass flow rates o	f hot and cold fla	uid stre	ean	is

MPE	08	8		14	•	. •				

- 91. The efficiency of chimney is approximately
 - (A) 80 %

(B) 40 %

(C) 20 %

- 0.25 %
- 92. The maximum efficiency for Parson's reaction turbine is given by
 - (A) $\eta_{\text{max}} = \frac{\cos \alpha}{1 + \cos \alpha}$
 - (B) $\eta_{\text{max}} = \frac{2\cos\alpha}{1+\cos\alpha}$
 - $\eta_{\text{max}} = \frac{2\cos^2\alpha}{1+\cos^2\alpha}$
 - (D) $\eta_{\text{max}} = \frac{1 + \cos^2 \alpha}{2\cos^2 \alpha}$
- 93. Most high speed diesel engines work on
 - (A) Diesel cycle

(B) Carnot cycle

Dual combustion cycle

(D) Otto cycle

- 94. Demand factor is defined as
 - (A) Average load/ maximum demand
 - Maximum demand / connected load
 - (C) Connected load / maximum demand
 - (D) Maximum demand × connected load
- 95. In a 4 cylinder petrol engine the standard firing order is
 - (A) 1-2-3-4

(B) 1-4-3-2

(C) 1-3-2-4

(0) 1-3-4-2

30.	VV 111	ch of the following thermocouples	nas the low	vest measuring range?	•
	(A)	Iron – Constantan	(B)	Chromel – Alumel	
	(e)	Copper - Constantan	(D)	Chromel – Constantan	
,					
97.	Whi	ch of the following is a positive dis	splacement	device?	
	(A)	Ultrasonic flow meter	B	Turbine flow meter	
	(C)	Laser Doppler Anemometer	(D)	Hot wire Anemometer	•
98.	A Ro	otameter can be used			
	(A)	Only in vertical orientation (dir-	ection)		
	(B)	Only in horizontal orientation (direction)		•
	(C)	In any orientation (direction)		•	
•	(D)	For zero orientation (direction)

- Maximum Principal Stress Theory $\sigma_1 = \sigma_2$
- Maximum Principal Strain Theory $\frac{\sigma_1}{E} \frac{\mu \sigma_2}{E} = \frac{\sigma_y}{E}$

Total Strain Energy Theory $\frac{\sigma_1^2}{2E} + \frac{\sigma_2^2}{2E} = \frac{\sigma_y^2}{2E}$.

(A) K

(C) K/2 (D) K/4

If principal stresses in a plane stress problem are $\sigma_1 = 100\,$ MPa and $\sigma_2 = 40\,$ MPa, then magnitude of the maximum shear stress (in MPa) will be,

(A) 176.2 196

30

(D) 981.0

105. Consider the following statements:

Assertion (A): An isotropic material is always homogeneous.

: An isotropic material is one in which all the properties are same in all the directions at every point.

Of these statements,

both (A) and (R) are true and (R) is the correct explanation of (A)

- (B) both (A) and (R) are true but (R) is not a correct explanation of (A).
- (C)(A) is true but (R) is false
- (D) (A) is false but (R) is true

106. The measurement of frictional power by William's Line is applicable only to

- (A) SI engines at a particular speed
- CI engines at a particular speed
- (D) None of the above (C) Any engine at a particular speed only

Maximum shear stress developed in a solid circular shaft subjected to pure shear is 107. 240 MPa. If the diameter of the shaft is doubled, then the maximum shear stress developed due to the same torque is

120 MPa ·

(B) 60 MPa

30 MPa

(D) 15 MPa

In a beam of I cross-section, subjected to a transverse load, the maximum shear stress is developed

- AT at the centre of the web
- (B) at the top edge of the top flange
- at the bottom edge of the top flange (D) at one third distance along the web

109.	The vessel pitches with an angular velocity of 0.5 rad/sec. Calculate the gyroscopic coup during the rise of bow. Assume radius of gyration of the rotor as 25.4 cm.				
	(A)	6451.61 N.m	(B)	6756.11 N.m	
	(C)	5404.89 N.m	(D)	8107.34 N.m	
110.		nk of radius 12 cm is rotating at 60 r angential acceleration of the crank is	pm wi	ith an angular acceleration of 50 rad/sec ² .	
•	(A)	4.75 m/s^2	(B)	5.2 m/s ²	
	(8)	6 m/s ²	(D)	7.4 m/s^2

Volumetric efficiency

Brake thermal efficiency (B)

Mechanical efficiency

(D) Brake power

164. In a 4. - cylinder, 4 - stroke Diesel engine operating at 1200 r.p.m., the duration of fuel injection is 20°. The time in seconds during which fuel is injected would be

(B) $\frac{1}{180}$ secs

 $\frac{1}{720}$ secs

(D) $\frac{1}{1440}$ secs

165. The output of an I.C. Engine is measured by a rope brake dynamometer. The diameter of the brake pulley is 750 mm and rope diameter is 50mm. The dead load on the tight side is 400 N and the spring balance reading is 50 N. The engine consumes 4.2 kg/h of fuel at rated speed of 1000 rpm. Then the brake specific fuel consumption of the engine is

(A) 0.143 kg/kWh B) 0.286 kg/kWh

(C) 0.268 kg/kWh 0.134 kg/kWh

The process of increasing the mass of charge introduced into the same volume of an engine 166. is called

- Super charging

(B) Scavenging

(C) Idling Tumbling

- Rich fuel air ratio is needed
- Lean fuel air ratio is needed
- (C) -Chemically correct fuel air ratio is needed
- (D) Any fuel air ratio will do

(A). Single cylinder engine

- Multi cylinder engine
- (C) Two stroke cycle engines
- (D) Four stroke cycle engine

The theoretically correct mixture of air and petrol is approximately equal to 169.

	(0)	Pump will develop cavitation	(D)	Pump will consume excess power							
		· ·	(1)	t dilp will consume execus power							
186.	If the	e specific speed of a turbine is in the r	ango of	200 1000 then the turbine is							
100.	(A)	Pelton	(B)	Francis							
	(A)	Kaplan .	(D)	Mixed .							
•				Mixed .							
187.	Capa	city of a hydraulic accumulator is gen	erally s	specified as							
-	(A)	Quantity of liquid accumulated									
	(B)	Maximum pressure developed									
	(0)	Maximum energy stored									
	(D)	Maximum Quantity of discharge all	owed								
	•										
188.	The f	The fin efficiency is defined as the ratio of the actual heat transfer from the fin to									
	(A)	(A) The heat transfer from the same fin with an adiabatic tip									
	(B)	The heat transfer from an equivaler	nt fin w	hich is infinitely long							
	C	The heat transfer from the same fir fin is the same as the base temperate		temperature along the entire length of the							
	(D)	The heat transfer through the base	area of	the same fin							
		4 *									

28

MPE08

- 189. Radiosity (J) for black surface is
 - Equivalent to emissive power E_h
- (B) Greater than emissive power
- (C) Less than emissive power
- (D) None of the above
- Without the use of superheater a boiler produces steam of about 190.
 - (A) 80% dryness fraction

90% dryness fraction

98% dryness fraction

- 88% dryness fraction
- The radiation heat transfer through large plates separated by N radiation shields becomes, when the emissivities of all surfaces are equal .
 - \dot{Q}_{12} , N shields = $\frac{1}{N+1}\dot{Q}_{12}$, no shield (B) \dot{Q}_{12} , N shields = $\frac{1}{N+1}$
- \dot{Q}_{12} , N shields = $(N+1)\dot{Q}_{12}$, no shield (D) \dot{Q}_{12} , N shields = $N(N+1)\dot{Q}_{12}$, no shield
- 192. Anything whether in the sender, the transmission or the receiver that bindery communication is called
 - (A) Signal

Noise

(C) Miscommunication

- Distortion
- 193. The isothermal efficiency of a reciprocessing compressor is defined as
 - Actual workdone during compression (A) Isothermal workdone during compression
 - Adiabatic workdone during compression (B) Isothermal workdone during compression
 - Isothermal workdone during compression (C) Actual workdone during compression
 - Isothermal workdone during compression Actual workdone during adiabatic compression
- The draught which a chimney produced is called 194.
 - Induced draught (A)

Natural draught

(C) Forced draught (D) Balanced draught

195.	Wate	r hammer is developed in		• • • • •						
1	(4)	Penstock	(B)	Draft tube	i					
	(C)	Turbine .	(D)	Surge Tank	٠					
196.	The f	unction of a moderator in nu	clear reactor is	-	•					
	LAY	To slow down the fast movi	ng electrons		•					
	(B)	To speed up the slow movin	g electrons							
	(C)	To start the chain reaction	_		•					
-	(D)	To transfer heat produced i	nside the reacto	r to a heat exchange	er .					
197.	In a I	Pressurised Water Reactor (P	WR)	•						
	(A)	The coolent water is pressu	rised to work as	moderator						
	(B)	The coolent water boils in the core of the reactor.								
-	10)	The coolent water is pressurised to prevent boiling of water in the core								
	(D)	No moderator is used								
	•									
198.		Bi–Metallic strips made of two different materials bend during a rise in temperatur because of								
si,	W	Differences in coefficient of	linear expansio	n ·	:					
	(B)	Differences in elastic properties								
	(C)	Differences in thermal cond			• •					
· ·	(D)	Difference in stress								
	ζ- /		1	· .						
199.	The p	orinciple of working of the co	nstant volume t	hermometer is base	d on					
	A	Boyle's law	·(B)	· Charle's law						
	(C)	Gay – Lussac's law	(D)	Equation of state						
		- w			<u>.</u> -					
200.	The i	nstrument which measures t	he temperature	of the source witho	ut direct contact is					
•	· (A)	Bi-metallic cut-out			*					
	(B)	Vapour pressure thermome	ter		_					
	10	Pyrometer			•					
	(D)	Thin film thermometer								
• .			1							
		•
